Summary

Information Science and Engineering student with hands-on experience in Python development and machine learning, including building and evaluating classification models with scikit-learn (Decision Tree, Random Forest, SVM) and deploying ML-driven applications with Flask and SQL-backed data pipelines. Strong foundation in Python OOP, advanced Python, and data structures and algorithms. Experienced in end-to-end ML workflows: data preprocessing, model training and evaluation, and fairness analysis. Quick learner with a track record of independently building and shipping full working projects.

Technical Skills

- **Programming Languages:** Python (OOP, Advanced Python), Java, C
- **Machine Learning:** scikit-learn, Decision Tree, ensemble methods, model evaluation, hyperparameter tuning, data preprocessing techniques, clustering
- **Databases & Querying:** SQL, MySQL, MongoDB, relational database design
- **Web & Backend:** Basics of Flask, HTML, CSS, JavaScript
- **DSA:** Data Structures and Algorithms
- **Tools:** Git, GitHub, VS Code, Eclipse, Jupyter Notebook
- **Soft Skills:** Time Management, Leadership, Teamwork, Problem Solving

Projects

Brain Health Analyzer

Final Year Project

- Developed an AI-powered healthcare web application using Python, Flask, and machine learning to analyze EEG brain signals for seizure prediction.
- Trained and compared ensemble classification models – Decision Tree, Random Forest, and SVM – to classify neurological states from an 85-feature EEG dataset with high accuracy.

Employee Attrition Prediction System

PySpiders Internship Project

- Built a machine learning system in Python to predict employee attrition using the IBM HR Analytics dataset, applying binary classification and risk-tier segmentation to identify at-risk employees.
- Integrated Fairlearn to perform fairness and bias analysis across model predictions, ensuring equitable outcomes across employee groups.
- Developed a Flask-based web dashboard to serve model predictions and visualize attrition risk for HR stakeholders.

Personal Expense Tracker

- Built a responsive web application using HTML, CSS, and JavaScript with localStorage for persistent, real-time expense tracking and category-based filtering.
- Integrated Chart.js for monthly and category-based data visualizations.

Education

Bachelor of Engineering – Information Science and Engineering

Bengaluru

The Oxford College of Engineering

June 2026

CGPA: 8.5

Pre-University – PCMB

Udupi

Poornaprajna PU College

February 2022

Result: 89%

Certifications

- Python with Data Science – PySpiders, BTM Layout, Bengaluru
- Python for Beginners

Languages

Kannada (First Language) | English (Proficient) | Hindi (Intermediate)
